FROM THE
REX-FORMING LINE

# Meatball-Former

- ▪ perfect shaping
- ▪ uncomplicated handling
- ▪ easy attachment to the filling machine
- ▪ precise weight display
- ▪ increase of productivity

# REX – FORMING LINE

## Meatball forming for perfect shaping

The meatball-former, which is part of the REX-Forming Line, makes it possible to shape diverse raw materials. With absolutely no adaptations it can be attached to every REX vacuum filling machine. The renowned REX quality guarantees optimum shaping with no adverse effect on product quality.

## Easy attachment to the filling machine

The REX-meatball-former, mounted on its own chassis frame, can be easily attached to the filling machine outlet. Electronic control is performed over the clipper socket of the vacuum filling machine, power supply is separate.
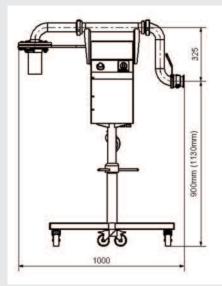

## Best portioning exactitude for economical production

Air from the raw material is evacuated in the in-feed system of the vacuum filling machine, according to adjusted weight it is consequently divided into exact portions. Shaping heads are available in diverse sizes and forms for individual requirements. These varying shapers can be easily adjusted and installed on the meatball former. By installing a „Dual-head" production can be increased.
